

Cambridge July 2¹ 1864
Dear Dr. Allen

Thanks for your
various favors, and for the
parcel of *Oleumatis* ^{*ochroleuca*} ~~*sericea*~~
and *Eleocharis rotundata* -
which arrived safely, and
for which I am very grateful.

No doubt the deeply notched
leaf is the less perfect con-
dition of *Marsilea*.

The lobed leaves in the
admirable specimens of
Oleumatis ^{*ochroleuca*} ~~*sericea*~~ - quite repre-
ted by me - show that the
species is of the same type as
O. reticulata. L

The *Ranunculus pusillus* is
nice and interesting.

Of course I want roots
of the *Oleumatis* - I thought
I had said so. - A good

in the Hall

I guess you must wait
some years yet for the
Lichens of N. ~~America~~ U.S.,
by Treckman. But he
keeps the end in view.
Write him about it.

The Marsilea is doing
well; and I ought to keep
the charge of freight.

I have been far too busy
to look at your parcel till
to-day,

Ever Yours truly

Asa Gray
